NEW IMIDAZOLE DERIVATIVES HAVING AGONISTIC OR ANTAGONISTIC  
ACTIVITY ON THE HISTAMINE  $H_3$  RECEPTOR.

The invention relates to novel imidazole  
5 derivatives having pharmacological activity. The invention  
is in particular directed to novel imidazole derivatives  
having agonistic or antagonistic activity on the histamine  
 $H_3$  receptor. More in particular the invention concerns 4-  
and 5-substituted aminoalkyl imidazoles and their  
10 derivatives.

The invention further relates to the synthesis of  
such compounds, pharmaceutical compositions comprising such  
compounds or pharmacological acceptable salts thereof, and  
the use of the compounds as agents having biological  
15 activity, as agents with agonistic or antagonistic activity  
on the histamine  $H_3$  receptor or for preparing a  
pharmaceutical composition.

The histamine  $H_3$  receptor is a presynaptic  
receptor, located in both the central and peripheral nervous  
20 system, the skin and in several organs such as the lung, the  
intestine and probably also in the spleen and the gastro-  
intestinal tract. Stimulation of the  $H_3$  receptor leads to  
inhibition of the release of histamine (autoreceptor), but  
also of other neurotransmitters (heteroreceptor), such as  
25 e.g. acetylcholine and serotonin.

A number of selective  $H_3$  ligands have been  
described. For a review see Leurs et al., Progress in Drug  
Res. 39, p. 127-165 (1992) and Lipp et al., in The Histamine  
Receptor, Wiley-Liss, Inc., p. 57-72 (1992). It has been  
30 shown that the  $H_3$  receptor can be regarded as a general  
regulatory system and as a potential target for new  
therapeutics (Timmerman, J. Med. Chem. 33, p. 4-11 (1990)  
and Schwartz et al., Agents and Actions 30, 1/2, p. 13-23  
(1990)).

35 Now a group of new imidazole derivatives showing  
agonistic or antagonistic activity on the  $H_3$  receptor has  
been identified. These derivatives can be represented by the  
general formula:

wherein the substituents are as defined in claim 1.

The imidazole derivatives of the present invention show either antagonistic or agonistic activity on the histamine  $H_3$ -receptor and may therefore be used as the active ingredient of pharmaceutical compositions.

The compounds of the formulas

wherein  $R'$  is hydrogen, methyl or ethyl and compounds of the formulas

wherein  $q$  is 2-5 and  $R''$  is hydrogen,  $(C_1-C_3)$ alkyl, aryl or aryl- $(C_1-C_3)$ alkyl have been previously disclosed. Of these compounds only derivatives of the formulas

and compounds of the formulas

5

wherein R' is hydrogen, methyl, ethyl.

are known to have (ant)agonistic activity on the H<sub>3</sub>-receptor.

The present invention comprises both linear and  
10 ringstructured compounds, all of which have the imidazole-  
part in common.

The linear compounds have for example one of the  
formulas

15

20

Compounds of formula I may be synthesized in  
general through a process that is analogous to the process  
as described in Vollinga et al., Recl. Trav. Chim. Pays-Bas,  
25 112, p. 123-125 (1993). The process preferably comprises C5-  
lithiation of a 1,2-diprotected imidazole and subsequent  
treatment with a suitable electrophile. The electrophile may  
be selected from the group consisting of halogen, aldehyde,  
keton, nitrile, epoxide or acylhalide.

30 In general compounds of formula I (compounds with  
R' is hydrogen excluded) can be prepared from compounds of  
formula I wherein R' represents hydrogen. For example  
compounds of formula III can be made from the compounds of  
formula II by simple addition or condensation reactions e.g.  
35 VUF 4613 can be made by the addition of methylisothiocyanate  
to VUF 4702.

For the synthesis of compounds of formula II, 1-  
chloro-*ω*-iodoalkanes can be used as electrophiles. In this

matter, an  $\omega$ -chloroalkane is introduced on the C5-position of the 1,2-diprotected imidazole. The chloro group can then be converted into an amino group and the protection groups removed.

5 Other compounds of formula I (excluding the compounds of formula II and III) have been made using aldehydes or ketones as electrophiles with subsequent removal, conversion or elimination of the formed hydroxyl group.

10 Of the imidazole derivatives of the invention VUF 4702 (4(5)-(5-aminopentyl)-1 H-imidazole dioxalate) shows a particular advantageous antagonistic activity, whereas VUF 4708 (4-[(4(5)-imidazolyl)methyl]piperidine) is a good agonist.

15 The following examples illustrate the synthesis of compounds of the present invention, but are never intended to limit the scope thereof.

#### EXAMPLE 1

20 Synthesis of 4(5)-(5-aminopentyl)-imidazole dioxalate (VUF 4702).

100 gram imidazole (1.5 mol), 160 ml dimethylsulfamoylchloride (1.5 mol) and 210 ml triethylamine (1.5 mol) were dissolved in 1000 ml toluene. After 16 hours  
25 of stirring, the precipitate was filtrated and the filtrate was concentrated under vacuo. The product (1-(N,N-dimethyl-sulfamoyl)imidazole) was distilled. Boiling point : 110°C at 0.4 mm Hg.

17.5 g. of 1-(N,N-Dimethylsulfamoyl)imidazole (0.1  
30 mol) was dissolved in dry THF (400 ml) under an atmosphere of dry nitrogen and cooled to -70°C. n-Butyllithium in hexane (65 ml, 0.1 mol) was added dropwise (temperature should not exceed -65°C). After 15 min, a solution of tert-butyl-dimethylsilyl chloride (15 g, 0.1 mol) in dry THF  
35 (30 ml) was added (10 min) and the solution was stirred at room temperature for 1 h. The mixture was cooled to -70°C again and n-butyllithium in hexane (65 ml, 0.1 mol) was added dropwise (temperature should not exceed -65°C). After

0.5 h, a solution of 1-chloro-5-iodopentane (23.3 g, 0.1 mol) in dry THF (20 ml) was added gradually and the mixture was allowed to (slowly) warm to room temperature overnight. The reaction mixture was poured into water (200 ml) and the 5 THF was removed under reduced pressure. The product was extracted with  $\text{CHCl}_3$  (3 x 150 ml), dried ( $\text{Na}_2\text{SO}_4$ ) and concentrated in vacuo.

The residue and phthalimide (15.0 g, mol) were dissolved in DMF (300 ml),  $\text{Na}_2\text{CO}_3$  was added (12.0 g, mol) 10 and the mixture was heated at 90°C. After 7 h the mixture was filtrated and the solvent was evaporated under reduced pressure. The residue was dissolved in  $\text{CHCl}_3$  (150 ml), washed with  $\text{H}_2\text{O}$  (3 x 150 ml), dried ( $\text{Na}_2\text{SO}_4$ ) and concentrated in vacuo.

15 The crude product was dissolved in 30 % HBr (300 ml) and heated under reflux. After 16 h the mixture was cooled, filtrated and concentrated under vacuo. The residue was dissolved in absolute EtOH (300 ml), heated under reflux for 0.5 h and concentrated under reduced pressure. The 20 remaining dark oil was washed (under stirring) with portions (100 ml) of acetone. After several washings, the oil crystallized. The residue was dissolved in  $\text{H}_2\text{O}$  and the pH was raised to 12 by adding  $\text{K}_2\text{CO}_3$ . The product was extracted with  $\text{CDCl}_3$ , dried on  $\text{Na}_2\text{SO}_4$  and concentrated under vacuo. The 25 product was dissolved in iso-propanol and an excess of a saturated solution of oxalic acid in iso-propanol was added (slowly). The formed precipitate was collected by centrifugation and washed with iso-propanol (three times). After recrystalization from methanol/iso-propanol, VUF 4702 30 was obtained as white crystals. The melting point was 155.7-156.6°C.

#### EXAMPLE 2

Synthesis of 4(5)-( -aminoalkyl)imidazole-derivatives.

35 Analogous to the preparation method of VUF 4702 from example 1, a number of compounds were synthesized according to formula II, using the corresponding 1-chloro-w

-iodoalkane. The meaning of n, the melting points and the exact mass results are given in the table below.

compound	n	melt. point (°C)	salt	ex. mass (measured)	ex. mass (calculated)
5					
VUF 4701	4	129.0-134.0	di HBr	139.1112	139.1109
VUF 4702	5	155.7-156.6	diox.	153.1266	153.1266
10 VUF 4732	6	132.0	diox.		
VUF 4733	8	95-100	diox.		
VUF 4734	10	154.5-155.0	diox.		

### EXAMPLE 3

15 Synthesis of N-methyl-N'-[6-(4(5)-imidazolyl)hexyl]thiourea oxalate (VUF 4740)

3 mmol VUF 4732 as dihydrobromic acid, was added to a solution of 6 mmol sodium dissolved in absolute ethanol. This solution was refluxed for one half hour, and  
20 the formed precipitate (after cooling to roomtemperature) was filtrated.

9.0 mmol methylisothiocyanate was added to the filtrate. After refluxing the reaction mixture for 2 hours, the ethanol was evaporated and the product was purified on a  
25 column packed with flash-silicagel with first ethylacetate as eluent (product stays on column :  $R_f = 0-0.1$ ; methylisothiocyanate eluted  $R_f = 1.0$ ). The product was subsequently eluted with methanol as eluent ( $R_f = 1.0$ ). The product was dissolved in ethylacetate and an excess of a  
30 saturated solution of oxalic acid in ethylacetate was added (slowly). The formed precipitate was collected by centrifugation and washed with ethylacetate (three times). After recrystallization from absolute ethanol, VUF 4740 was obtained as white crystals. The melting point was  
35 106.5-110.0°C.

**EXAMPLE 4**

Synthesis of N-substituted-N'-[ $\omega$ -(4(5)-imidazolyl)alkyl]-thiourea-derivatives.

Analogous to the preparation method of VUF 4740 from example 3, a number of compounds were synthesized according to formula III, using the corresponding 4(5)-( $\omega$ -aminoalkyl)-imidazole-derivative. The meaning of n, the melting points and the exact mass results are given in the table below.

compound	n	R	melt. point (°C)	salt	ex. mass (measured)	ex.mass (calculated)
VUF 4577	2	methyl	99.9-100.8	HBr	184.0782	184.0783

**EXAMPLE 5**

Synthesis of N-benzyl-4-(1-dimethylsulfamoyl-5-imidazolyl)piperid-4-ol (VUF 4765).

- 5        10.0 g. of 1-(N,N-Dimethylsulfamoyl)imidazole (57 mmol) was dissolved in dry THF ( 150 ml) under an atmosphere of dry nitrogen and cooled to -70°C. n-Butyllithium in hexane (35 ml, 57 mmol) was added dropwise (temperature should not exceed -65°C). After 15 min, a solution of trimethylsilyl
- 10 chloride (6.2 g, 57 mmol) in dry THF was added and the solution was stirred at room temperature for 1 h. The mixture was cooled to -70°C again and n-butyllithium in hexane (35 ml, 57 mmol) was added dropwise (temperature should not exceed -65°C). After 1 h, a solution of
- 15 N-benzyl-4-piperidone (10.8 g, 5.7 mmol) in dry THF was added gradually and the mixture was allowed to (slowly) warm to room temperature overnight. The reaction mixture was poured into water and the THF was removed under reduced pressure. The product was extracted with CHCl<sub>3</sub> (3 x 150 ml),
- 20 dried (Na<sub>2</sub>SO<sub>4</sub>) and concentrated in vacuo.

**EXAMPLE 6**

Synthesis of 4-(1-dimethylsulfamoyl-5-imidazolyl)piperid-4-ol (VUF 4764).

- 25        1.0 gram of VUF 4765 (2.7 mmol) was dissolved in methanol. 0.1 gram Pd/C (10%) and 1 gram of ammoniumformate (16 mmol) was added and the mixture was refluxed for one hour. After filtration the product was concentrated in vacuo.

30

**EXAMPLE 7**

Synthesis of 4-(4(5)-imidazolyl)1,2,3,6-tetrahydropyridine dihydrobromide (VUF 4736).

- 35        8.5 gram of VUF 4764 was dissolved in 30% HBr and refluxed for 16 hours. The solution was evaporated in vacuo and the residue was refluxed in absolute ethanol. A white precipitate was collected by centrifugation and washed with acetone (three times). The melting point was 271-275°C.

**EXAMPLE 8**

Synthesis of 4-(4(5)-imidazolyl)piperidine dihydrobromide (VUF 4735).

1.0 gram of VUF 4736 was dissolved in methanol, 0.1 gram Pd/C (10%) was added and this mixture was hydrogenated for 16 hours with 20 atm. of H<sub>2</sub> in an autoclave. The reaction mixture was filtrated, concentrated and washed with absolute ethanol. The melting point was 260-263°C.

**10 EXAMPLE 9**

Synthesis of 4-[(1-dimethylsulfamoyl-5-imidazolyl)methyl]-piperidine oxalate (VUF 4709)

1.0 g. of 1-(N,N-Dimethylsulfamoyl)imidazole (5.7 mmol) was dissolved in dry THF (50 ml) under an atmosphere of dry nitrogen and cooled to -70°C. n-Butyllithium in hexane (3.6 ml, 5.8 mmol) was added dropwise (temperature should not exceed -65°C). After 15 min, a solution of tert-butyl-dimethylsilyl chloride (0.9 g, 5.7 mmol) in dry THF (15 ml) was added (5 min) and the solution was stirred at room temperature for 1 h. The mixture was cooled to -70°C again and n-butyllithium in hexane (3.6 ml, 5.8 mmol) was added dropwise (temperature should not exceed -65°C). After 0.5 h, a solution of 4-pyridinecarboxaldehyde (0.6 gram, 5.8 mmol) in dry THF (15 ml) was added gradually and the mixture was allowed to (slowly) warm to room temperature overnight. The reaction mixture was poured into water (100 ml) and the THF was removed under reduced pressure. The product was extracted with CH<sub>2</sub>Cl<sub>2</sub> (3 x 150 ml), dried (Na<sub>2</sub>SO<sub>4</sub>) and concentrated in vacuo.

11.53 gram (28.4 mmol) of the residue (made from a larger batch) was dissolved in 150 ml. of acetonitrile. 5.2 ml. of DBU (35 mmol) was added. 3.6 ml. acetic anhydride (38 mmol) was added after 10 min. and after 15 min. stirring at ambient temperature, the reaction mixture was concentrated in vacuo. The residue was dissolved in CH<sub>2</sub>Cl<sub>2</sub> and washed with H<sub>2</sub>O (three times). The organic layer was dried on Na<sub>2</sub>SO<sub>4</sub> and concentrated in vacuo. The product was purified by a

column packed with flash-silicagel with ethylacetate as eluent ( $R_f$  on TLC = 0.51).

7.3 gram of the purified product (16.7 mmol) was dissolved in 50 ml. of acetic acid, 0.7 gram Pd/C (10%) was added and this mixture was hydrogenated for 16 hours with 50 atm. of  $H_2$  in an autoclave. The reaction mixture was filtrated, concentrated and washed with absolute ethanol (2 times with 20 ml.). The hydrogenation was incomplete and repeated once more as described above.

The residue was dissolved in  $H_2O$  and the pH was raised to 12 by the addition of  $K_2CO_3$  and extracted with  $CH_2Cl_2$ . The organic layer was dried with  $Na_2SO_4$ , concentrated under reduced pressure and dissolved in ethylacetate. An excess of a saturated solution of oxalic acid in ethylacetate was added (slowly). The formed precipitate was collected by centrifugation and washed with ethylacetate (three times). The melting point was 120.8-121.1°C.

#### 20 EXAMPLE 10

Synthesis N-substituted-N'-[4-[1-dimethylsulfamoyl-4(5)-imidazolyl)methyl]piperidine]thiourea.

Analogous to the preparation method of VUF 4740 from example 3, from VUF 4709, a number of compounds were synthesized with the formula :

30

The meaning of R, the melting points and the exact mass results are given in the table below.

compound	R	melt.point (°C)	ex.mass (measured)	ex.mass (calculated)
VUF 4711	methyl	131.7-134.5		
VUF 4712	cyclo- hexyl	137.10138.8		

35

**EXAMPLE 11**

Synthesis of 4-[(4(5)-imidazolyl)methyl]piperidine dihydrobromic acid (VUF 4708).

5.5 gram (16.5 mmol) of VUF 4709 was refluxed in 30% HBr for 16 hours. The solution was concentrated under reduced pressure and the residue was dissolved and refluxed in absolute ethanol for one hour. This mixture was concentrated in vacuo and washed with acetone (three times). The white crystals were collected and the melting point was 221.1-222.7°C.

**EXAMPLE 12**

Synthesis of N-substituted-N'-[4-[4(5)-imidazolyl)methyl]-piperidine]thiourea.

Analogous to the preparation method of VUF 4740 from example 3, from VUF 4708, a number of compounds were synthesized with the formula :

The meaning of R, the melting points and the exact mass results are given in the table below.

25

compound	R	melt. point (C°)	salt
30 VUF 4713	methyl		ox.
VUF 4714	cyclo- hexyl	159.8-160.2	HBr

Table 1. <sup>1</sup>H NMR results of the compounds mentioned in the description.

VUF 4577 (D<sub>2</sub>O): δ 2.87 (s, 3H, CH<sub>3</sub>), 3.03 (t, 2H, J=7 Hz, imidazole-CH<sub>2</sub>), 3.78 (t, 2H, J=7 Hz,

### Pharmacological experiments

The agonistic and antagonistic activities on the histamine  $H_2$  receptor of the various compounds were determined with a test system, described in Vollinga et al.,  
5 Meth. Find. Clin. Exp. Pharmacol., 14(10), p. 747-751 (1992).

The results of the experiments are given in the tables 2 and 3 below.  $PD_2$  is the negative value of the concentration of the test compound at which 50% agonistic  
10 activity was measured.  $PA_2$  is the negative logarithm of the concentration of the test compound at which the concentration of the agonist had to be doubled to obtain the same effect as obtained when the antagonist was absent.

Pharmaceutical compositions, comprising compounds  
15 of formula I as the active ingredient for therapeutically influencing the human and animal histaminergic system have the form of powders, suspensions, solutions, sprays, emulsions, unguents or creams and can be used for local application, intranasal, rectal, vaginal and also for oral  
20 or parenteral (intravenous, intradermal, intramuscular, intrathecal etc.) administration. Such compositions can be prepared by combining (i.e. by mixing, dissolving etc.) of the active compound of formula I in the form of a free acid or salt with pharmaceutically acceptable excipients with  
25 neutral character (such aqueous or non-aqueous solvents, stabilizers, emulsifiers, derergents, additives), and further if necessary colouring agents and flavouring agents.

The concentration of the active ingredient in a pharmaceutical composition can vary between 0.1% and 100%,  
30 depending on the nature of the influence and the method of administration. The dose of the active ingredient that is administered can further be varied between 0.1 mg and 100 mg per kg bodyweight.

## CLAIMS

1. Imidazole-derivatives of the general formula:

wherein :

10 A is

- 1) a group of the formula  $(CH_2)_m$ , wherein  $m = \underline{0-9}$ ; or
- 2) a group of the formula:.

wherein  $R^5$  represents hydrogen,  $(C_1-C_3)$ alkyl-, aryl( $C_1-C_3$ )alkyl-, aryl-, wherein aryl may optionally be substituted, hydroxyl-,  $(C_1-C_3)$ alkoxy-, halogen, amino-, cyano- or nitro; and  $R^6$  represents hydrogen,  $(C_1-C_3)$ alkyl-, aryl( $C_1-C_3$ )alkyl-, or aryl-, wherein aryl may optionally be substituted; or

25 3) a group of the formula:

30 wherein  $R^5$  and  $R^6$  are as defined above; or

4) a group of the formula:

35

if B is a group of the formula:

5 such that A and B together form a group of the formula:

wherein  $R^6$  is as defined above; or  
5) a group of the formula:

wherein  $R^6$  is as defined above; or  
20 6) a group of the formula:

25 if B is a group of the formula:

30

such that A and B together form a group of the formula:

wherein  $R^6$  is as defined above; or

7) a group of the formula:

5

wherein  $x+y = m-1$ ;

B is

1) a group of the formula:

10

wherein  $R^5$  is as defined above; or

15

2) a group of the formula:

20

if A is a group of one of the formulas:

25

such that A and B together form a group of one of the formulas:

30

wherein  $R^6$  is as defined above; or

35

3) a group of the formula:

if X is a group of the formula:

such that B and X together form a group of the formula

wherein  $p = 1-3$ ; or

15 X is

- 1) a group of the formula  $(\text{CH}_2)_n$ , wherein  $n = 2-4$ ; or
- 2) a group of the formula:

if B is a group of the formula:

30 such that X and B together form a group of the formula:

wherein  $p = 1-3$ ; or

- 3) two hydrogens (one on the carbon and one on the nitrogen); or

4) one hydrogen on the carbon atom and one R<sup>7</sup> group on the nitrogen atom,

wherein R<sup>7</sup> represents hydrogen, (C<sub>1</sub>-C<sub>10</sub>)alkyl-, aryl(C<sub>1</sub>-C<sub>10</sub>)alkyl-, or aryl, wherein aryl may optionally be substituted;

Y is a group of the formula (CH<sub>2</sub>)<sub>k</sub>, wherein k = 0-2;

R<sup>1</sup> represents hydrogen, (C<sub>1</sub>-C<sub>3</sub>)alkylsulfonamide-, (C<sub>1</sub>-C<sub>3</sub>)alkyl-, aryl(C<sub>1</sub>-C<sub>3</sub>)alkyl- or aryl, wherein aryl may optionally be substituted;

10 R<sup>2</sup> represents hydrogen, (C<sub>1</sub>-C<sub>10</sub>)alkylsilyl-, (C<sub>1</sub>-C<sub>3</sub>)alkyl-, aryl(C<sub>1</sub>-C<sub>3</sub>)alkyl- or aryl, wherein aryl may optionally be substituted;

R<sup>3</sup> represents hydrogen, halogen, amino-, nitro-, hydroxyl-, mercaptan, (C<sub>1</sub>-C<sub>3</sub>)alkoxy-, (C<sub>1</sub>-C<sub>3</sub>)alkylsulfide-;

15 R<sup>4</sup> represents hydrogen, (C<sub>1</sub>-C<sub>10</sub>)alkyl-, (C<sub>1</sub>-C<sub>3</sub>)alkyl-sulfonamide-, aryl(C<sub>1</sub>-C<sub>10</sub>)alkyl-, aryl, wherein aryl may optionally be substituted;  
or a group of the formula :

or a group of the formula :

wherein X represents O, S, or NH,

30 R<sup>7</sup> is as defined as above;

R<sup>8</sup> represents (C<sub>1</sub>-C<sub>10</sub>)alkyl-, aryl(C<sub>1</sub>-C<sub>10</sub>)alkyl- or aryl,  
wherein aryl may optionally be substituted and

wherein aryl is phenyl, substituted phenyl, naphtyl,  
substituted naphtyl, pyridyl;

35 or pharmacological acceptable salts thereof,  
excluding derivatives of one of the formulas:

wherein R' is hydrogen, methyl, ethyl;  
and derivatives of the formulas:

10

15

wherein q is 2-5 and R'' is hydrogen, (C<sub>1</sub>-C<sub>3</sub>)alkyl, aryl  
or aryl(C<sub>1</sub>-C<sub>3</sub>)alkyl.

20

2. Imidazole derivatives of formula I, wherein  
A is a group of the formula (CH<sub>2</sub>)<sub>m</sub>, wherein m = 1-9, and  
1) when X represents two hydrogens (one on the carbon and  
one on the nitrogen);  
25 B represents a group of the formula:

25

30

Y represents a group of the formula (CH<sub>2</sub>)<sub>k</sub>, wherein  
k = 0; or

2) when X represents one hydrogen on the carbon atom and  
one R<sup>7</sup> group on the nitrogen atom,

35

wherein R<sup>7</sup> is as defined in claim 1;  
B represents a group of the formula:

5 Y represents a group of the formula  $(\text{CH}_2)_k$ , wherein  $k = 0$ ; and

$\text{R}^2$  represents hydrogen,  $(\text{C}_1\text{-C}_3)$ alkyl-, aryl-  
 $(\text{C}_1\text{-C}_3)$ alkyl- or aryl, wherein aryl may optionally be  
substituted;

10  $\text{R}^3$  represents hydrogen; and

$\text{R}^1$  and  $\text{R}^4$  are as defined in claim 1.

3. Imidazole derivatives of formula I, wherein  
A is a group of the formula  $(\text{CH}_2)_m$ , wherein  $m = 0$ , and  
1) when B is a group of the formula:

15

20

wherein  $\text{R}^5$  is as defined in claim 1;

X represents a group of the formula  $(\text{CH}_2)_n$ , wherein  
 $n = 2-4$  and Y represents a group of the formula  $(\text{CH}_2)_k$ ,  
wherein  $k = 0-2$ , with the restriction that  $n+k = 3$  or  
4; or

25 2) when B and X together form a group of the formula:

30

wherein  $p = 1-3$ ,

Y represents a group of the formula  $(\text{CH}_2)_k$ , wherein  
 $k = 0-2$ , with the restriction that  $p+k = 2$  or 3;

35  $\text{R}^3$  represents hydrogen; and

$\text{R}^1$ ,  $\text{R}^2$  and  $\text{R}^4$  are as defined in claim 1.

4. Imidazole derivatives of formula I, wherein:  
when A is a group of the formula:

5

wherein  $R^5$  and  $R^6$  are as defined in claim 1;  
B represents a group of the formula:

10

15

wherein  $R^5$  is as defined in claim 1;  
X represents a group of the formula  $(CH_2)_n$ , wherein  $n = 2-4$ ;  
and  
Y represents a group of the formula  $(CH_2)_k$ , wherein  $k = 0-2$ ,  
with the restriction that  $n+k = 3$  or  $4$ ; and  
 $R^1$ ,  $R^2$ ,  $R^3$  and  $R^4$  are as defined in claim 1.

20

5. Imidazole derivatives of formula I, wherein  
A is a group of the formula:

25

wherein  $R^5$  and  $R^6$  are as defined in claim 1;  
B represents a group of the formula:

30

35

wherein  $R^5$  is as defined in claim 1;  
X represents a group of the formula  $(CH_2)_n$ , wherein  $n = 2-4$ ;  
Y represents a group of the formula  $(CH_2)_k$ , wherein  $k = 0-2$ ,  
with the restriction that  $n+k = 3$  or  $4$ ;  
 $R^3$  represents hydrogen; and  
 $R^1$ ,  $R^2$  and  $R^4$  are as defined in claim 1.

6. Imidazole derivatives of formula I, wherein  
when A and B together form a group of the formula:

wherein R<sup>6</sup> is as defined in claim 1;  
X represents a group of the formula (CH<sub>2</sub>)<sub>n</sub>, wherein n = 2-4;  
10 Y represents a group of the formula (CH<sub>2</sub>)<sub>k</sub>, wherein k = 0-2,  
with the restriction that n+k = 3 or 4;  
R<sup>3</sup> represents hydrogen; and  
R<sup>1</sup>, R<sup>2</sup> and R<sup>4</sup> are as defined in claim 1.

7. Imidazole derivatives of formula I, wherein  
15 when A is a group of the formula:

wherein R<sup>6</sup> is as defined in claim 1;  
B represents a group of the formula:

wherein R<sup>5</sup> is as defined in claim 1;  
X represents a group of the formula (CH<sub>2</sub>)<sub>n</sub>, wherein n = 2-4;  
30 Y represents a group of the formula (CH<sub>2</sub>)<sub>k</sub>, wherein k = 0-2,  
with the restriction that n+k = 3 or 4;  
R<sup>3</sup> represents hydrogen; and  
R<sup>1</sup>, R<sup>2</sup> and R<sup>4</sup> are as defined in claim 1.

8. Imidazole derivatives of formula I, when A and  
35 B together form a group of the formula:

5

wherein  $R^6$  is as defined above;

X represents a group of the formula  $(CH_2)_n$ , wherein  $n = 2-4$ ;

Y represents a group of the formula  $(CH_2)_k$ , wherein  $k = 0-2$ ,  
with the restriction that  $n+k = 3$  or  $4$ ;

10  $R^3$  represents hydrogen; and

$R^1$ ,  $R^2$  and  $R^4$  are as defined in claim 1.

9. Imidazole derivatives of formula I, wherein

A is a group of the formula  $-(CH_2)_x - S - (CH_2)_y -$ , wherein  
 $x+y = m-1$ , and

15 1) when X represents two hydrogens (one on the carbon and  
one on the nitrogen);

B represents a group of the formula:

20

Y represents a group of the formula  $(CH_2)_k$ , wherein  
 $k = 0$ ; or

25 2) when X represents one hydrogen on the carbon atom and  
one  $R^7$  group on the nitrogen atom,

wherein  $R^7$  is as defined in claim 1;

B represents a group of the formula:

30

Y represents a group of the formula  $(CH_2)_k$ , wherein  
 $k = 0$ ; and

35

$R^2$  represents hydrogen,  $(C_1-C_3)$ alkyl-, aryl-

$(C_1-C_3)$ alkyl- or aryl, wherein aryl may optionally be  
substituted;

$R^3$  represents hydrogen; and  
 $R^1$  and  $R^4$  are as defined in claim 1.

10. Imidazole derivative as claimed in claim 2  
 having the formula/wherein the derivative is N-methyl-  
 5 N'-[6-(4(5)-imidazolyl)hexyl]thiourea.

11. Pharmaceutical composition having agonistic or  
 antagonistic activity on the histamine  $H_3$ -receptor  
 comprising a suitable excipient and as the active ingredient  
 an imidazole derivative of the formula I

10

15

20

wherein the substituents are as defined in claim 1,  
 excluding the derivatives of the formulas

25

30

and derivatives of the formulas

35

wherein  $R^1$  is hydrogen, methyl, ethyl;

12. Pharmaceutical composition as claimed in claim 11, wherein the active ingredient is a derivative of the formulas

wherein n is 5 or 6 and R<sup>7</sup> is hydrogen, (C<sub>1</sub>-C<sub>10</sub>)alkyl-, aryl(C<sub>1</sub>-C<sub>10</sub>)alkyl-, or aryl, wherein aryl may be optionally be substituted.

13. Pharmaceutical composition as claimed in claim 11 or 12, wherein the active ingredient is 4(5)-(5-aminopentyl)-imidazole or 4(5)-(6-aminohexyl)-imidazole.

14. Pharmaceutical composition as claimed in claim 11 or 12, wherein the active ingredient is N-methyl-N'-[5-(4(5)-imidazolyl)pentyl]thiourea or N-methyl-N'-[6-(4(5)-imidazolyl)hexyl]thiourea.

15. Pharmaceutical composition as claimed in claim 11 or 12, wherein the active ingredient is 4-(4(5)-imidazolyl-methyl)piperidine.

16. Method of preparing imidazole derivatives as defined in claim 11, by C5-lithiation of a 1,2-diprotected imidazole and subsequent treatment thereof with a suitable electrophile.

17. Method as claimed in claim 16, wherein the electrophile is a halogen, aldehyde, keton, nitrile, epoxide or acylhalide.

18. Use of the derivatives as defined in claim 11 as a biological active agent.

19. Use of the derivatives as defined in claim 11 as an agent having agonistic or antagonistic activity on the histamine H<sub>3</sub>-receptor.

20. Use of derivatives as defined in claim 11 as a pharmaceutical composition showing agonistic or antagonistic activity on the histamine H<sub>3</sub>-receptor.

5 21. Use of the derivatives as defined in claim 11 as a medicament for the treatment of H<sub>3</sub>-receptor related disorders.

10 22. Use of the derivatives as defined in claim 11 for the preparation of a pharmaceutical composition showing agonistic or antagonistic activity on the histamine H<sub>3</sub>-receptor.

23. Use of the derivatives as defined in claim 11 for the preparation of a medicament for the treatment of H<sub>3</sub>-receptor related disorders.

# INTERNATIONAL SEARCH REPORT

In international application No.

PCT/NL94/00206

## Box I Observations where certain claims were found unsearchable (Continuation of item 1 of first sheet)

This international search report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:

1. ☐ Claims Nos.:  
because they relate to subject matter not required to be searched by this Authority, namely:
  
2. ☐ Claims Nos.:  
because they relate to parts of the international application that do not comply with the prescribed requirements to such an extent that no meaningful international search can be carried out, specifically:  
Claims searched incompletely: 1-9, 11, 18-23  
  
Please see attached sheet ./.
  
3. ☐ Claims Nos.:  
because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a).

## Box II Observations where unity of invention is lacking (Continuation of item 2 of first sheet)

This International Searching Authority found multiple inventions in this international application, as follows:

1. ☐ As all required additional search fees were timely paid by the applicant, this international search report covers all searchable claims.
  
2. ☐ As all searchable claims could be searched without effort justifying an additional fee, this Authority did not invite payment of any additional fee.
  
3. ☐ As only some of the required additional search fees were timely paid by the applicant, this international search report covers only those claims for which fees were paid, specifically claims Nos.:
  
4. ☐ No required additional search fees were timely paid by the applicant. Consequently, this international search report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.:

Remark on Protest

- ☐ The additional search fees were accompanied by the applicant's protest.
- ☐ No protest accompanied the payment of additional search fees.

FURTHER INFORMATION CONTINUED FROM PCT/ISA/

As the drafting of the claims is not clear and concise (Art. 6, PCT) and encompasses such an enormous amount of products a complete search is not possible on economic grounds (See Art. 17(2)(a)(i), PCT). Guided by the spirit of the application and the inventive concept as disclosed in the descriptive part of the present application the search has been based on examples.
